

Advanced Connect features Exercise

Q.

- You have to create a simple Shopping Cart Application using React and Redux.
- On the Left, you will have a list of Products, with an Add to Cart button with each of the product. If the product *has* available quantity, it can be added to the Cart, otherwise the button will be *disabled*.
- On the right you will have a Cart section which will display all the products you have added to the cart. It will display the Product *image, name, quantity added, price* for one, and *total price*. You can also *remove* products from the cart.
- As you add a product to cart, it's quantity will decrease, and if it is removed from the cart, the quantity will increase.
- Style the components as you like. But follow best practices, Container components, Presentational Components etc.
- Use sample products data from here:
